

Kuehne + Nagel Environmental Policy

Kuehne + Nagel is committed to offering environmentally sound, sustainable and innovative supply chain solutions that continually reduce our impact on the environment. Sustainability considerations form an integral part in the formulation of strategy and in decision making.

To further this policy Kuehne + Nagel has committed itself to the following:

- Measure its environmental impact and strive to continuously improve its environmental performance.
- Implement an effective carbon management programme throughout all Kuehne + Nagel operations, to include the monitoring and reporting of carbon dioxide emissions, and the setting of annual emissions reduction targets.
- Reduce its natural resource consumption by focusing on opportunities to minimise, reuse, and recycle goods used in its operations, and to use recycled products and those from sustainable sources where possible.
- Provide environmentally sensitive product alternatives (transportation and warehousing) that allow customers to meet their sustainability commitments.
- Communicate its environmental policies, objectives and targets to employees and subcontractors, encouraging individual participation and involvement in improving environmental performance.
- Include environmental performance as key criteria in supplier selection, and encourage and promote suppliers that are able to offer more sustainably-sourced alternatives.
- Ensure that all relevant environmental legislation and regulation is applied.
- Have in place pollution incident response plans, to prevent and mitigate the environmental impact of accidental spills or releases.
- Implement "good neighbour" policies, respecting the surrounding local environment and population.
- Utilise certification to ISO 14001 as a platform for development, documentation, implementation, and maintenance of processes, practices and procedures related to our Environmental Management Systems.
