

A high-voltage lead logistics solution

Since last December, in four locations in India Kuehne + Nagel has provided comprehensive lead logistics services for KEC International Limited, one of the world leaders in the project business for the construction of power transmission lines

KEC International is a part of the RPG Group, one of India's largest industrial conglomerates with about 60,000 employees in more than 20 companies spanning a range of business sectors. An important

factor for the choice of Kuehne + Nagel as the company's Lead Logistics Provider (LLP) was its good track record in offering lead logistics solutions for Saregama India Ltd., the entertainment unit of RPG Group.

In order to support KEC International Limited in focusing on its core competence in the design, manufacture, supply and construction of turnkey projects for power transmission lines and in the execution of railway electrification projects, under a three-year contract Kuehne + Nagel is providing a comprehensive range of services. These include order management, inbound and outbound transport planning and execution, lead logistics service provider procurement, freight bill audit services, network analysis, freight management and documentation.

The specialists in Kuehne + Nagel's lead logistics competence centre in Delhi ensure efficient implementation of the comprehensive solution tailored to the individual business requirements of the customer. For the logistics provider, whose award-winning web-based monitoring and reporting system KN Login also forms a part of the package, its cooperation with KEC International is further proof of its capabilities in the management of complex supply and delivery chains in widely differing industrial sectors.
