Transform your inbound supply chain. Drive value.

KNI2M Empowering efficiency.

Overland Inbound

KUEHNE+NAGEL

Turning inbound logistics into your competitive advantage

Drawing on our vast experience, Kuehne + Nagel delivers a comprehensive overland product that will help you take control of your inbound supply chain.

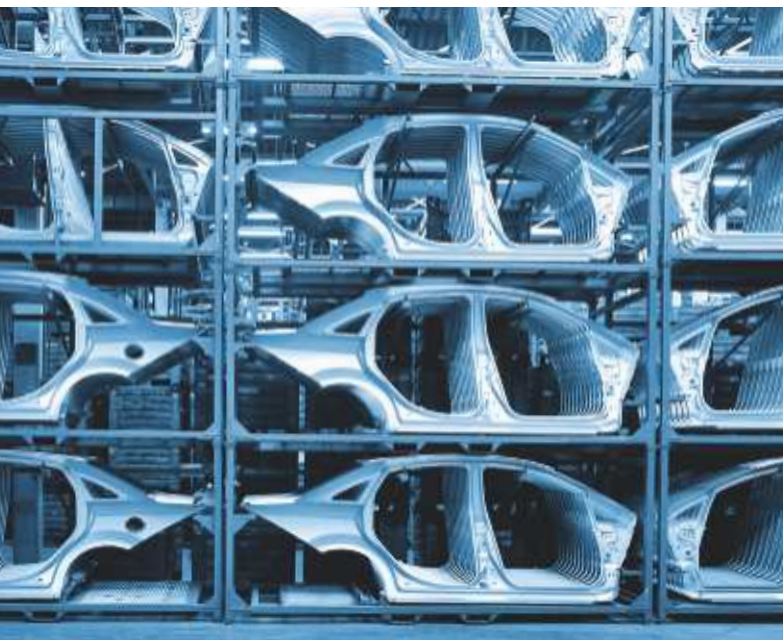

With increasing network fragmentation, companies have to smarten up and find new ways of becoming more productive and competitive. There is an urgent need to overcome disruptions and reduce inefficiencies caused by the decentralisation of the inbound supply chain. And yet it's exactly the inbound supply chain that offers enormous untapped potential – often overlooked by companies attempting to increase their efficiency.

Kuehne + Nagel identified the need for an improved strategic approach to managing and controlling inbound workflows and subsequently developed its new KN I2M product. This all-encompassing solution covers the management of your entire inbound supply chain. It provides the planning, control and execution of your shipments to improve the supply of goods to factories – helping you to continuously optimise costs and improve responsiveness.

KN I2M leverages our extensive experience and capabilities in control, technology and operational execution. We enable you to establish higher levels of standardisation, achieve leaner supply chain management – and significantly improve your key material and information flows.

KN I2M

The inbound to manufacturing supply chain solution that helps you benefit from sustainable network improvement, greater transparency and control – enabling your business to gain a competitive edge in the market

KN I2M TRANSFORMS YOUR INBOUND SUPPLY CHAIN TO ACHIEVE A CONTROLLED, COST-EFFECTIVE PRODUCTION FLOW AND MEASURABLE ECONOMIES OF SCALE TO DRIVE SUSTAINABLE VALUE FOR THE FUTURE.

- Dynamic coordination, planning and execution of your inbound supply chain processes
 - Lower cost per unit through the controlled flow of materials into your manufacturing processes
 - Improved responsiveness that enables you to anticipate, control and react to supply chain volatility
 - Reliable and accurate material cost allocation that can be assigned to individual units or parts
 - End-to-end capabilities that optimise inventory levels while reducing operating costs and inventory obsolescence
 - Control centres that provide a single point of contact to ensure process transparency, product quality and operational excellence
-

Driving value through transparency, control and efficiency

KN I2M provides innovative solutions for material procurement and inbound logistics that help you and your suppliers optimise processes, increase efficiency and reduce costs.

As customer requirements change and supply chains become more complex, managing the risks of disruption has become ever more difficult. Inefficient and inflexible procurement operations hamper manufacturers' ability to adapt supply to production needs. This results in incorrect or missing inventory.

TRANSPARENCY AND INSIGHT

KN I2M optimises procurement and supply processes by providing in-depth visibility and transparency across your supply chain.

KN I2M transparency features provide:

- Integrated order forecasts, orders and lines
- Near real-time visibility of orders, parts, shipments and inventory
- Transparency in freight costs and budget deviations
- Support for both push and pull supply chain execution

CONTROL AND CERTAINTY

To ensure streamlined and efficient control, KN I2M provides information about orders and shipments as well as KPI reports.

KN I2M control features provide:

- Order fulfilment with measurements of deviations
- Report and performance monitoring with reviews of network utilisation and service-level compliance
- Freight settlement procedures with central freight invoicing
- Supplier and order management with order confirmation procedures

EFFICIENCY AND FLEXIBILITY

KN I2M offers flexible, integrated solutions to allow seamless operations across organisational boundaries.

KN I2M efficiency features include:

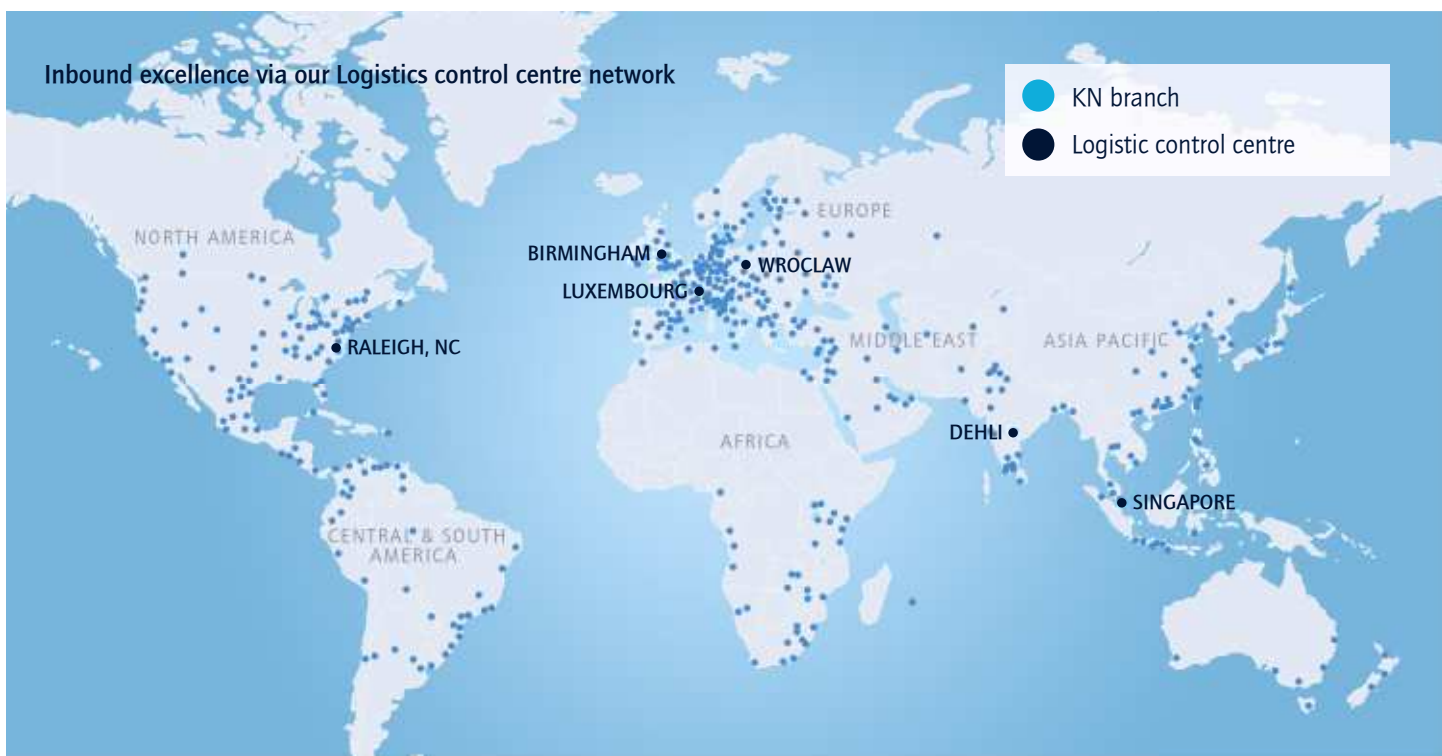

- Dynamic planning of supply chain transportation and logistics
- Lower costs per unit, increased flexibility and faster reaction times
- Reliable cost allocation with accurate budgeting processes
- Faster order fulfilment times and higher productivity

VISIBILITY, MONITORING AND REPORTING ACROSS YOUR INBOUND SUPPLY CHAINS WITH KN LOGIN

KN Login, our industry-leading logistics information management system gives you full visibility of your inventory, whether in transit or in storage, enabling you to monitor exactly where your goods or orders are at any particular time.

This web-based system lets you manage your supply chain more effectively by providing exactly the information you need – in the way you want to see it.

Inbound excellence via our Logistics control centre network

KN I2M AT A GLANCE

- Collaborative and sustainable business processes that contribute to continuous cost optimisation and flexible risk mitigation
- Global logistics network and industry know-how bundled into one overland product
- Operational excellence, cutting-edge IT solutions, systems and skills
- Product quality ensured via the global Kuehne + Nagel Logistics control centres
- Innovative business model with long-term sustainability

KN I2M BENEFITS INCLUDE

- Scalable, flexible and transparent logistics processes that improve efficiency and create economies of scale
- Collaborative and sustainable practices that optimise costs and mitigate risk
- Dynamic planning and execution of your inbound supply
- Lower cost per unit through controlled flow of materials
- Improved transparency and responsiveness, enabling you to anticipate, control and react to supply chain volatility
- Reliable and accurate material cost allocation on individual units or parts
