

Kuehne + Nagel Gallery iPad app

Kuehne + Nagel Gallery app Real-time visibility for hotel developers

REAL TIME INFORMATION WHEN YOU NEED IT MOST

How can you keep an eye on the progress of your furniture, fixtures and equipment (FF&E) installation projects without having to be there in person?

Here at Kuehne + Nagel, we know that inventory management is one of the toughest challenges you face when equipping a new property. Which rooms are complete? Which items are still to arrive? Where are the risks?

With the KN Gallery iPad app, Kuehne + Nagel takes a modern approach to this old problem. Created specifically for FF&E projects, KN Gallery gives you full visibility over your properties, showing you the real-time, current status at a glance.

This smart, innovative solution is aimed at relieving a key pressure point, ensuring you have all furniture, fittings and equipment in the right place through the hotel, ready for opening. Typically these locations are guest rooms, restaurants, conference rooms and ballroom.

WATCH YOUR HOTEL PROJECT TAKE SHAPE -- ON-SCREEN

Our user-friendly KN Gallery app, compatible with Apple iPad, enables all project stakeholders to monitor the project in real time.

Installation crew benefit from the convenience of handheld scanners to feed data into the system while FF&E management have instant access to KN Gallery's document library, exception management and room handover functionality.

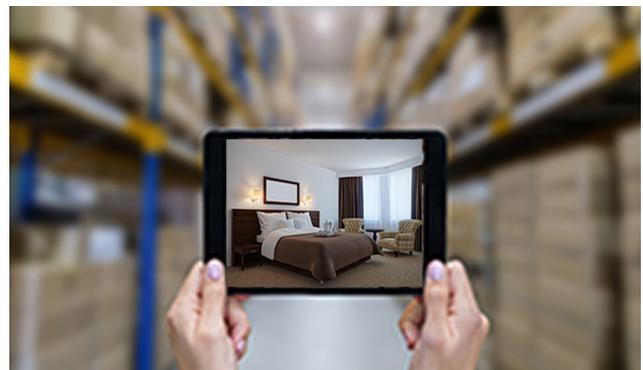

POWERING UP PROJECT COMMUNICATION

KN Gallery is the link between the warehouse and the installation crew, enabling project members to run the entire process, or limited to operations linked with their role e.g. planning deliveries from the warehouse, managing installation and logging exceptions.

A VIRTUAL IMAGE OF YOUR HOTEL ON A TABLET

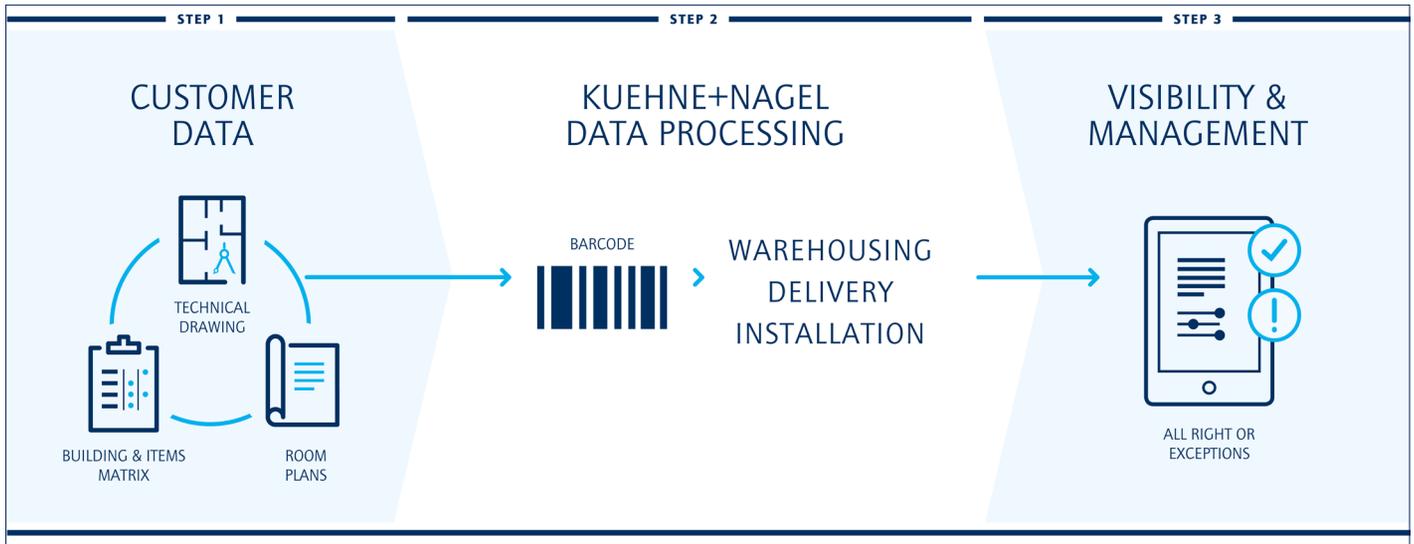

Think of KN Gallery as a form of virtual reality view of your properties. We set up the property structure and room matrix in the application, including specifications of different rooms and other hotel areas, for instance lobby area, restaurants, ballrooms and podiums.

This picture is then matched against available inventory and purchase order data so that specific items can be precisely matched to individual spaces.

KN GALLERY BENEFITS INCLUDE

- Time savings with no need to wait for team members to return from site
- No duplication of work, transferring notes to systems, spreadsheets or emails
- Lower risk of human error with electronic data transfer
- Reduced paperwork means less chance of losing/damaging vital information/images
- Lower costs, more convenience from reduced need to archive paper records
- Linked to Warehouse Management System for instant updates

HOW IT WORKS:

1. Understanding your project

We consult with you to understand your project, your priorities and your timelines.

Typically, we ask about your on-site team and how it's structured, so that we know how best to communicate with you.

We ask about the project, of course. This usually includes floor plans, details of items, and installation requirements.

Finally, what are your deadlines and milestones?

2. Data processing

Once we have this vital information, we can analyse it.

One of the key results of this data processing stage is the ability to produce barcodes.

With barcodes, we can manage physical warehouse processes like labelling, scanning and storage -- and later on, delivery and installation.

3. Visibility

This is where our innovative app comes in.

All stock movements, delivery schedules and installation progress are visible in real time, 24/7, through the iPad app.

To help manage risk, status updates include information on exceptions, disruptions, and other issues that need resolution.
